

HOLDSWORTH  
*Windows*

*Specialists in  
Steel Windows & Leaded Lights*

# HOLDSWORTH Windows

*Holdsworth Windows was founded in 1967 by the present Managing Director, Mr Graham Holdsworth, who continues to run the business from day to day with the help of his manager and co director Mr Mark Glover, who joined the company in 1985. We specialise in the manufacture of purpose made hot dip galvanised steel windows and leaded lights, and also carry out fixing and glazing, including the removal of old frames.*

# HOLDSWORTH *Windows*

*Holdsworth Windows can manufacture windows from a variety of sections to suit most requirements. The sections used will depend on the individual contract and could be simple angle iron frames, light universal or standard sections, W20 sections or even heavier box sections. The fittings are normally brass, but we do have our own period handles and stays. If required we can often re-use existing fittings*

*The steel windows are hot dip galvanised after manufacture, and are then powder coated as required. (Usually to a standard RAL colour). The opening lights are fitted with neoprene weatherstripping.*

*Sample three light window in our offices*

*Left - double glazed with leaded double glazed units*

*Centre - genuine leaded light*

*Right - double glazed leaded unit conforming to Document L of latest building regulations*

*Double glazed Art Deco steel windows*

glazed units set into timber  
subframe*

*Small pane  
cottage windows*

*New powder coated  
steel windows at  
Hatton Park, Warwick*

*Broughton Castle, Banbury, Oxfordshire: Leaded lights re-made using all existing glass and metal openings where possible*

*Holdsworth Windows produce all types and designs of genuine leaded lights for churches, and private houses in conservation areas. The leaded lights will be made either to match existing or to suit the particular style of building. These lights are usually made from clear sheet glass, but can have handmade antique or patterned glass and can also re-use existing glass. The lead comes are normally reinforced with steel cores and can vary in width from 4mm for cabinet work up to 20mm. Copper ties can also be fitted for attaching to saddle bar. We can also undertake restoration of existing lights, including removing and re-fixing and temporary glazing*

*Re-made leaded panels being re-fitted back into stone surround*
